change of climate "alters the circles under  
which the foetus is bred" - no other circum-  
stance so important

569 "The slighter differences which mark the  
species individually, seem to lose them-  
selves in the sameness of form belonging  
to the genus, and even suggest a suspicion  
that they all proceeded from one original.  
The phenomena of resemblance must  
have had their sufficient reason as well  
as those of diversity."

x<sup>d</sup> It ~~thinks~~ <sup>asks</sup> <sup>is</sup> <sup>more</sup> probable that "the genus at  
its first creation was one and uniform,  
x<sup>d</sup> and afterwards became diversified  
by the influence of external circumstances"

He thinks however that when a genus "grew into  
existence" some slight modification in the productive  
causes stamped it originally with a ~~these~~ specific

Prichard Edii volii 5070

(575)

^ Varieties branch out from the common form of a species just as the forms of species deviate from the common type

x^d of a genus - (why should the appearance of blossoms be ~~without~~ <sup>the effect of</sup> end or utility, a mere effect of chance, more than the others? x^d  
570 The fact is well exemplified taken from domestic animals - small mountain cattle &

571 Variation by law so that structure adapted to circumstances.

505 he infers "that the whole number, in each species respectively, has probably descended from a single primitive stock" x^d  
Providence called "in its existence only, no family, or race, in each particular kind"

x^d This doesn't look like belief in a plan

243 complexion "The development of individual varies  
is promoted by the influence  
of particular external  
agencies, and takes place  
chiefly in particular climates,"  
x)

529 "external agencies" cause of Japanese  
xanthousness

539 "The Anam & the Thai differ physically.  
The difference must be attributed to a long  
abode in countries of somewhat different  
climate"  
x)
